Assignment 2 — JavaScript Fundamentals

Subject: Web Development
Assignment No.: 02
Title: JavaScript Programming and Form Validation
Difficulty: Beginner–Intermediate
Submission Format: PDF / DOCX

Objective

To understand JavaScript fundamentals and implement basic programming logic and client-side form validation.

Problem Statement

JavaScript adds logic and interactivity to websites. It can validate user input, respond to events, manipulate webpage content, and perform calculations.

Questions

1. What is JavaScript? Explain its importance.
2. Explain the major features of JavaScript.
3. Explain var, let, and const.
4. Explain JavaScript data types with examples.
5. Explain arithmetic, comparison, and logical operators.
6. Explain if, if-else, and else-if statements.
7. Explain for and while loops.
8. What is a function? Explain with an example.
9. What is an array? Explain any five array methods.
10. What is an object in JavaScript?
11. What is DOM? Explain its importance.
12. Explain JavaScript events with examples.
13. What is form validation?
14. Explain how JavaScript can be used for client-side validation.
